

To install QHardware Jupyter Notebook, we recommend to download Anaconda and Python first.

1. Download anaconda from here

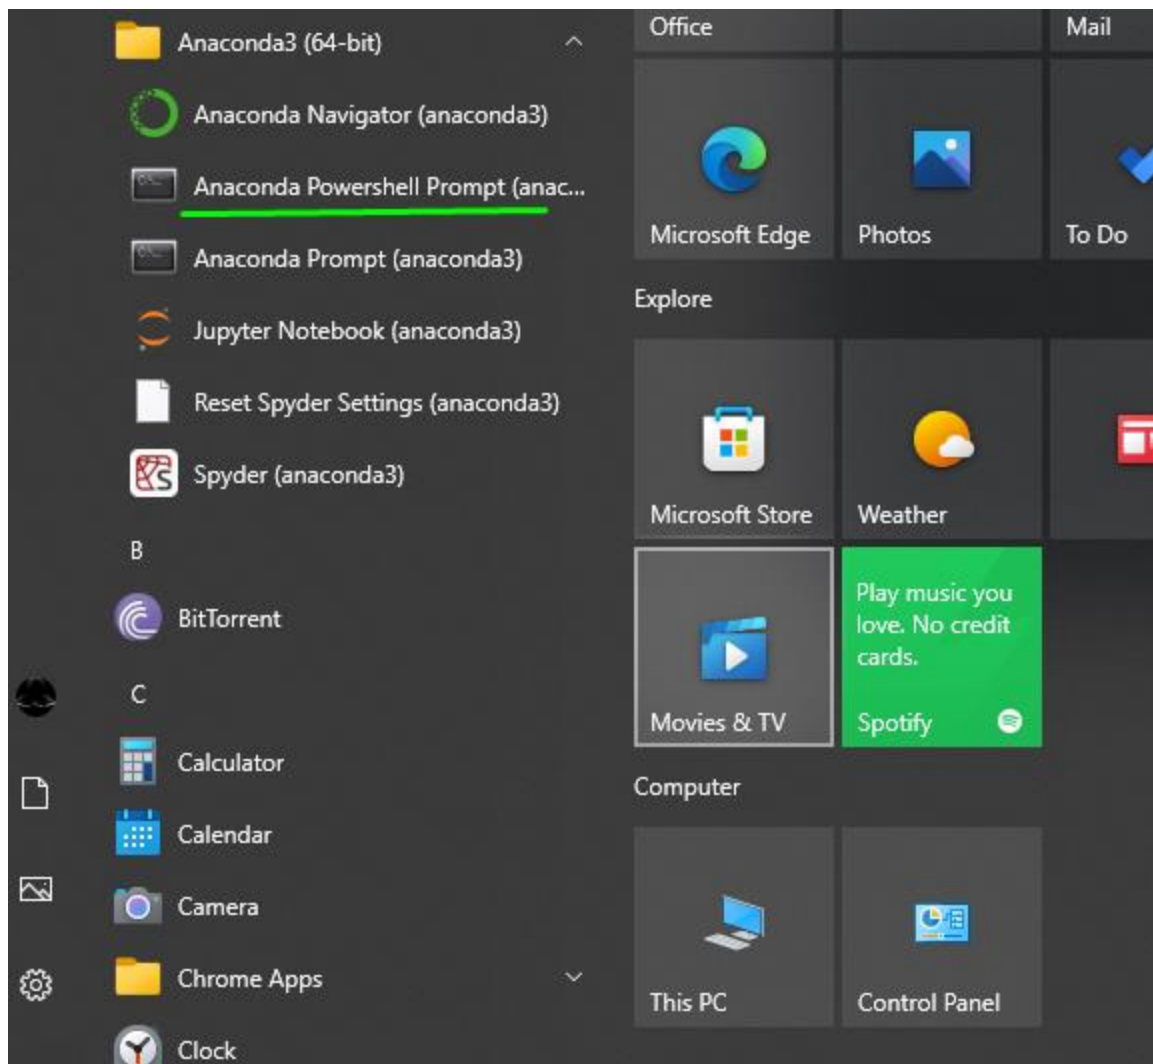

(<https://www.anaconda.com/products/distribution>)

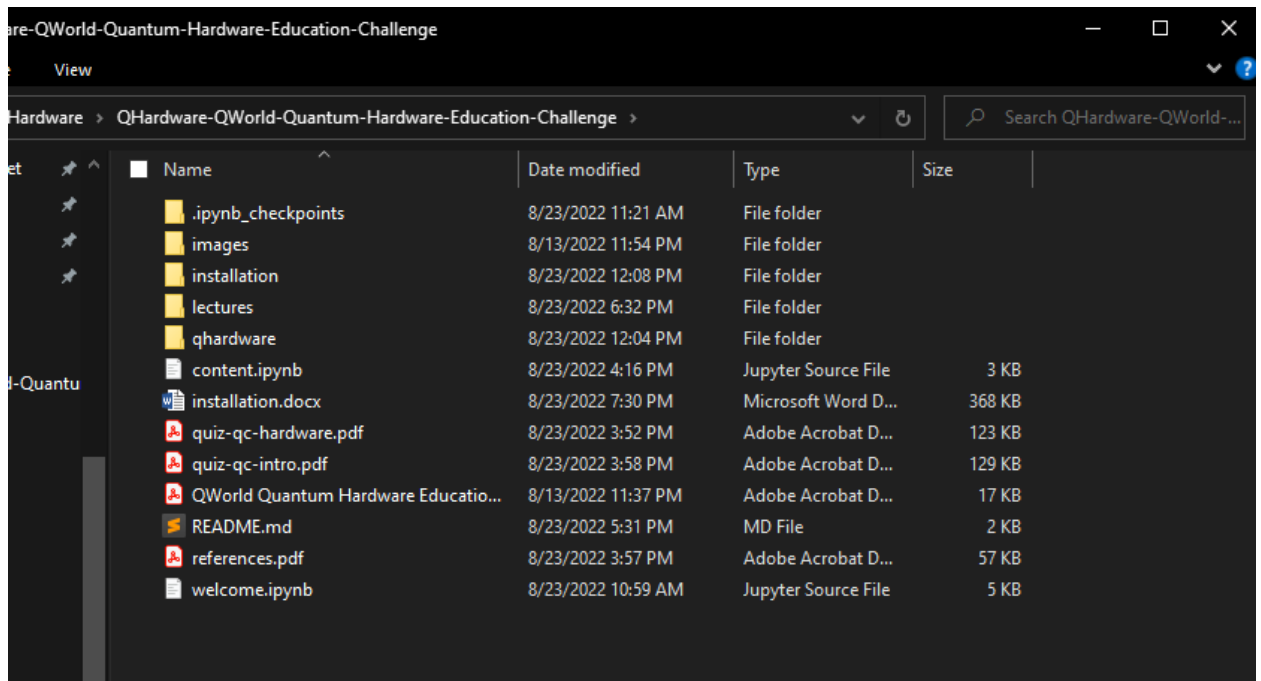

2. Install it for your operating system
3. Download or clone the repository of QHardware from GitHub
(<https://github.com/tanjinadnanabir/QHardware-QWorld-Quantum-Hardware-Education-Challenge>)

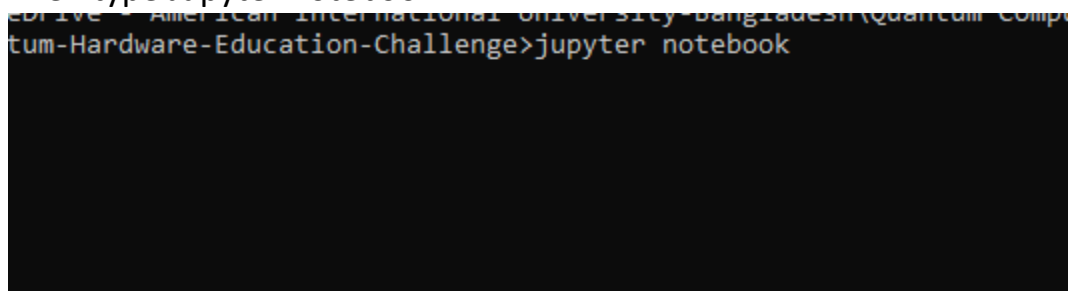

4. Extract the folder and save it in your pc.
5. open anaconda command prompt from start menu

6. Go to the folder from command prompt where you saved the QHardware folder

7. From command prompt, type `cd <space> folder location`
8. Alternatively, open cmd from the folder
9. Then type Jupyter notebook

10. Run the notebooks and learn.

Thanks
